The introductory site from the Android Developers was straightforward. The only issues I ran in to involved running the emulator for a Nexus 5 on my OS which is an Ubuntu derivative. The stack overflow link below was referenced to try and fix the issue. I didn't have any luck fixing the Nexus 5 AVD so instead tested on a Pixel XL AVD which gave no problems. In the video I fill out the EditText field and then use the button to send the string captured to another activity. This activity displays the text in a TextView and contains a back button to the initial screen. In the clip I use the back button to enter in a new string. I then view the TextView again to show that the string changed value.
